DETAILED ACTION

Response to Arguments

- Applicant's arguments, see page 2, lines 4-9, filed 07 December 2005, with respect to claims 1,6 and 15 have been fully considered and are persuasive. The rejection of these claims has been withdrawn.

EXAMINER'S AMENDMENT

- An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
- Authorization for this examiner's amendment was given in a telephone interview with Ms. Jennifer R. Leach, Registration number 54,257 on 13 February 2006.
- The application has been amended as follows: Claim 5, please replace lines 2-4 with the new paragraph, "image data obtained by using the image data decompression method defined in claim 4, decompressing the compressed image data based on the compression information added to the compressed image data, the image display method comprising the step of:".

REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards an image compression method and apparatus for obtaining compressed image data to which compression information regarding compression processing is added upon compression of image data. The closest prior art, Asai et al. (USPN 5,841,935), shows a similar system, in which, in a coding method and a recording and reproducing apparatus, a moving image and a compressed moving image can be coded and decoded by means of the GOP sequence without using the GOP sequence information, the image frames are arranged in the same frame order in each of the plurality of GOP's and at the same time, each of the GOP's are set so that the GOP is processed in the same GOP sequence. Then, correspondence information is set that allows the color frame sequence information to correspond to the GOP sequence on a one to one basis, the GOP sequence that corresponds to

the color frame sequence information extracted from the moving image and the compressed animated image data is selected by using the set information to perform the coding process and the decoding process by means of the selected GOP sequence. However, Asai et al. fail to address: "for adding new compression information regarding new compression processing to the compression information already added to the image data". This distinct feature has been added to all independent claims and render them allowable.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
